Project Contribution (%):	20	20	20	20	20

Team Overall:

First of foremost, despite the differences in each member's assigned tasks and evaluation criteria, everyone has demonstrated outstanding qualities. Each team member made valuable contributions that were both useful and beneficial to the project's overall success. That's why I decided to give the Excellent scoring weight to everyone in the above table.

In terms of attitude and communication, everyone maintained a respectful and active contribution during discussions. We provide regular and daily updates on our progress and any obstacles, including bugs report. Although it was not mentioned in the Meeting Minute, we often had online meetings if we were unable to find a solution via chat, especially between Tuan Anh and me. In addition, everyone consistently attended group meetings either online or offline and demonstrated commitment and dedication to their assigned tasks, which I am extremely thankful that everyone is responsible for determining the best strategy to finalize the project.
